

# **Medical tourism in the Kirov region**

**The Center of Traumatology,  
Orthopedics and Neurosurgery**

# Medical tourism

Medical tourism is a healthcare industry which is dynamically developing in the Kirov region. Patients from all the regions of Russia, the CIS and foreign countries are diagnosed and treated in our leading regional medical centers.

# Medical fields

Neurosurgery

Arthroscopy

Orthopedic surgery

# Medical center

## The Center of Traumatology, Orthopedics and Neurosurgery

The clinic provides medical care for the patients from all the regions of Russia with diseases and injuries of the musculoskeletal system, the backbone, the peripheral and central nervous systems and their consequences, cicatricial deformations of integuments and the consequences of burns.

# The Center of Traumatology, Orthopedics and Neurosurgery

- treats more than **6,700** non-resident patients annually,
- conducts more than **17,000** surgeries, over **3,700** of which are hi-tech,
- contains **21** departments and **19** equipped operating rooms

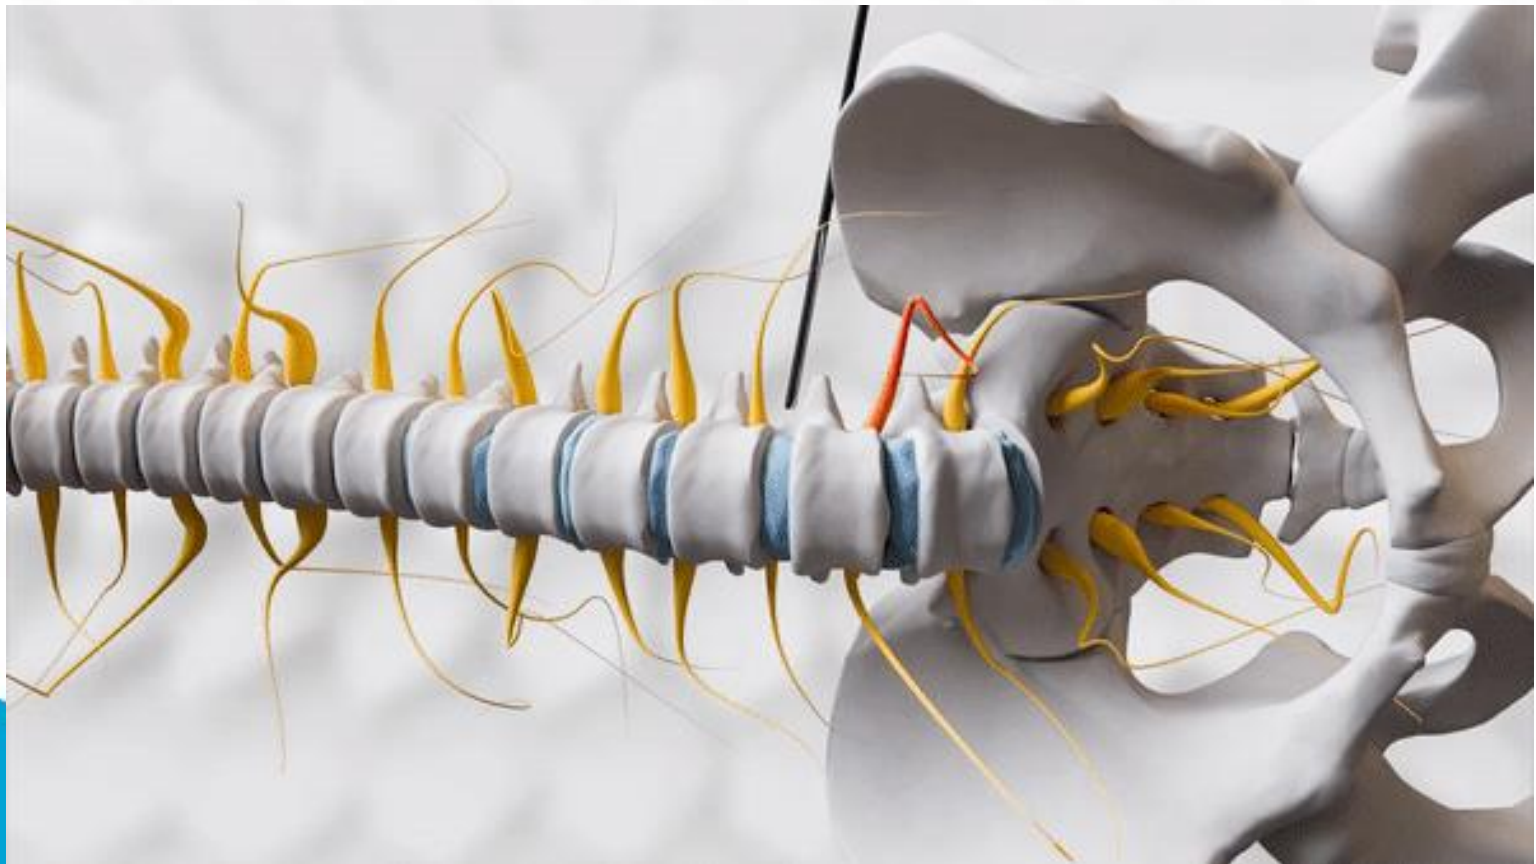

## AMONG PATIENTS CENTER OF TRAUMATOLOGY:

Republic of Komi.....	1724
Arkhangelsk region.....	989
Udmurt Republic.....	959
Samara region.....	779
Nizhny Novgorod region.....	713
Perm region.....	254

## Endoscopic spinal surgery

The operation is performed with a minimum puncture, no more than 1 centimeter wide. A port (special tube) is installed without muscle splitting incisions, and an endoscope is inserted through it. The image is visualized on the screen and the doctor can see the anatomical structures of the body and the hernia.

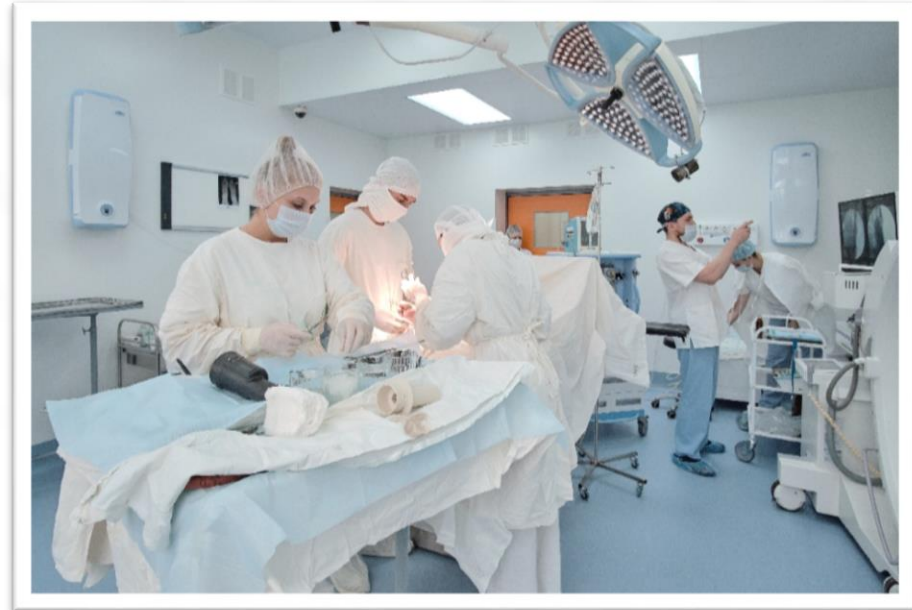

In the medical centers there are highly qualified clinical specialists who conduct complex surgical interventions, assisting patients with various diseases.

# The medical equipment

It is presented in a range of different forms: from computer and magnetic resonance imaging used for diagnostic manipulations, the extensive line of x-ray complexes, including digital ones, to the operating rooms with the latest equipment. Hi-tech equipment includes X-ray apparatuses with C-carrier arms used for intraoperative radioscopy, devices for blood reinfusion, expert class endovideo surgical racks, computer navigation devices, and also modern respiratory, watching and electrosurgical equipment and many other medical devices.
